Put Back Pain Behind You.
“For years I had degenerative disc pain with arthritis and was feeling hopeless. At forty I was told to accept it as part of growing old—then I found the IDD THERAPY® regimen! Now I remember what it is like to feel 100% pain-free.”

—Anna Ragghianti
Atlanta, GA

In a recent clinical study, 92% of surgical candidates avoided surgery and reported a 50% or greater decrease in pain after undergoing IDD Therapy treatment.* This same study found that patients who reported initial success with IDD Therapy treatment continued to have a significant reduction in pain at the time of follow-up—anywhere from two months to two full years after completing treatment. These highly promising results suggest that one full course of IDD Therapy treatment promotes long-term healing, letting you get back to the business of living your life!

What is IDD Therapy®?
Intervertebral Differential Dynamics (IDD) Therapy is a gentle, computer-controlled treatment which promotes the natural healing of degenerative discs, stimulating the hydration and renewal of damaged tissue. During therapy, the patient lies on the IDD Therapy table for approximately 30 minutes per visit. The treatment gently manipulates the patient’s offending spinal segments. Through the therapy, the vertebrae are distracted, unloading intra-discal pressures. As normal spinal function is restored, so is the patient’s mobility and relief.

Meet one of the thousands of IDD Therapy spinal rehab success stories.

“After years of doctor’s visits, I’ve finally found a real solution. My back no longer restricts my life.”

Sgt. James J. Murray
Norwich, CT

“As head of my department’s dive team, I suffered the effect of my job: a disc bulge, degenerative disc disease, and a herniation from lifting my scuba gear. Then a neurosurgeon prescribed IDD Therapy treatment. The sessions were very comfortable, not strenuous like most physical therapy.

“Now I can plan physical activities without worry, and thanks to IDD Therapy treatment...”

“I’ve finally gotten my life back!”

Developed by a team of medical doctors that includes neurosurgeons, neurologists, and orthopedic surgeons, IDD Therapy rehabilitation is different from other treatments because it:

> NON-SURGICAL
IDD Therapy treatment has no side effects and requires no recovery time.

> PROVEN EFFECTIVE
Even when drugs, epidurals, and surgery have failed, IDD Therapy treatment has shown dramatic results.

> GENTLE
Treatment is comfortable, even relaxing.

> AFFORDABLE
The total cost of a full treatment regimen is typically much less than your co-pay for surgery.

And easy pay plans are also available.
